

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A pharmaceutical composition of small-sized, unilamellar liposomes, for parenteral administration of an active compound, comprising: liposomes with an average diameter from about 75 nm to about 300 nm, wherein the unilamellar membrane contains a mixture of saturated lipids, said unilamellar membrane containing at least one lysophospholipid in an amount of about 0.5 mol% to 6.0 mol% regarding the total lipid content, and a therapeutic compound being encapsulated inside said liposomes encapsulated doxorubicin inside said liposomes in a ratio of about 8.5% by weight to about 11.5% by weight related to the total weight of lipids in the liposomes.
2. (Currently Amended) The [[A]] composition according to claim 1, wherein the lysophospholipid is selected from lysophosphatidylcholine, lysophosphatidylinositol, lysophosphatidylserine and lysophosphatidic acid or combinations thereof.
3. (Currently Amended) The [[A]] composition according to claim 1, wherein the saturated lipids are selected from phosphatidylcholine, ~~cholesterol~~, phosphatidylethanolamine, phosphatidylinositol, phosphatidylglycerol, hydrogenated natural phosphatidylcholine (~~soy and/or egg~~), distearoyl phosphatidylethanolamine derivatized with O-methylated polyethyleneglycol 750-5000, dipalmitoyl phosphatidylethanolamine derivatized with O-methylated polyethyleneglycol 750-5000 or combinations thereof.
4. (Currently Amended) The [[A]] composition according to claim 3, wherein distearoyl phosphatidylethanolamine is derivatized with O-Methyl-polyethylene-glycol 2000.
5. (Currently Amended) The [[A]] composition according to claim 3, wherein dipalmitoyl phosphatidyl ethanolamine is derivatized with O-methyl-polyethylene-glycol 2000.
- 6-9. (Canceled)
10. (Withdrawn) A method of preparing a composition according to claim 1, comprising the steps of: forming liposomes from a solution containing saturated lipids and at least a

lysophospholipid in an amount of about 0.5 mol% and 6.0 mol% regarding the total lipid content, and evaporation to dryness; taking the film up in aqueous solution; submitting the foregoing solution to freezing and thawing cycles extruding through membranes of decreasing pore up to a membrane of 50 nm pore, obtaining liposomes with an average diameter of about 75 nm to about 300 nm, dialyzing the liposome suspension, and mixing the dialyzed liposome suspension with a solution of the active compound.

11. (Withdrawn) A method according to claim 10, wherein the lysophospholipid is selected among lysophosphatidylcholine, lysophosphatidylinositol, lysophosphatidylserine and lysophosphatidic acid.

12. (Withdrawn) A method of preparing a composition of claim 9, comprising the steps of: forming liposomes from a solution containing saturated lipids and at least a lysophospholipid in an amount of about 0.5 mol% to 6.0 mol% regarding the total lipid content, and evaporating to dryness; taking the film up in a solution of an ammonium salt; submitting the foregoing solution to freezing and thawing cycles extruding through membranes of decreasing pore up to a membrane of 50 nm pore, obtaining liposomes with an average diameter of about 75 nm to about 300 nm; dialyzing the liposome suspension against an aqueous solution without ammonium ions; mixing the dialyzed liposome suspension with a solution of about 50 mM to about 200 mM of a soluble calcium salt and a solution of doxorubicin at a concentration of about 2 to about 30 mg/ml, obtaining a percentage of more than 80% of encapsulation of doxorubicin.

13. (Withdrawn) A method according to claim 12, wherein the calcium salt is calcium chloride.

14. (Withdrawn) A method according to claim 12, wherein the volume ratio of calcium chloride solution to doxorubicin solution is of 1: 10 (v: v).

15. (Withdrawn) A method according to claim 12, wherein the percentage of encapsulated doxorubicin increases between 20 to 70% in the presence of calcium chloride, compared to a method which does not use calcium chloride.

16. (Withdrawn) A method according to claim 13, wherein the volume ratio of calcium chloride solution to doxorubicin solution is of 1: 10 (v: v).
17. (New) The composition according to claim 3, further comprising cholesterol.
